

## **2023 Gender pay gap**

### **What is the gender pay gap?**

The gender pay gap is the difference between the average pay for all men and for all women in a workforce.

Nationally, the median gender pay gap is 15.4%.<sup>1</sup> This means that the UK's female employees earn 84.6% of that earned by male employees.

The gender pay gap is different to equal pay. Equal pay refers to men and women being paid the same to do the same or similar jobs, or to do work of equal value.

### **What do gender pay gap figures tell us?**

#### *Averages*

The mean and median are two different ways of calculating an average. Using both figures can give a clearer picture of the situation than simply using one.

The mean figure is calculated by summing the hourly pay rates for each member of staff, then dividing by the number of staff. This is the most commonly used way of calculating an average.

The median figure is the 'middle' value when hourly pay rates for all staff members are ranked in ascending order. The advantage of using the median figure to describe the average is that it is not skewed by extremely large or small salaries at either end of the pay scale.

#### *Gender pay gap values*

All calculations in this report have been made using pay data for the month containing 31 March 2022 (the 'snapshot date'), as required by the legislation.

Where figures are positive in the following tables, this shows that on average women are earning less than their male counterparts. For example, a figure of 20% would show that the average hourly rate for women is 80% that of their male colleagues.

Where figures are negative, this indicates that women are earning more than their male counterparts. For example, a figure of -20% would show that, on average, women are earning 120% of what their male colleagues earn.

**Test Valley Borough Council data**

**Percentage gender difference in mean and median hourly pay rate**

The ‘single figure’ pay gap is the difference between the pay of men and women across the whole organisation, including both part-time and full-time staff from all pay grades.

	<b>Median</b>	<b>Mean</b>
<b>Single figure pay gap</b>	-19.3%	-5.2%

*These figures have been rounded to 1 decimal place*

The median calculation of the single figure pay gap shows that the median female employee earns more than the median male employee.

The mean figure shows that on average, female employees are earning slightly more than their male counterparts. This is a contrast with the median figure, the mean shows the difference between the average male and female pay to be to a much lesser extent than the median figure suggests.

These figures indicate that there are more men on lower pay grades than there are women, but also that there are slightly more men in the higher quartiles.

**Percentage of male and female employees who received recognition payments**

	<b>Number of staff awarded recognition payments</b>	<b>Percentage of employees awarded recognition payments</b>
<b>Male</b>	9	3.5%
<b>Female</b>	22	10.0%
<b>Total</b>	31	6.5%

*These figures have been rounded to 1 decimal place*

**Percentage difference in mean and median recognition payments**

	<b>Mean recognition payments</b>	<b>Mean recognition payments gap</b>	<b>Median recognition payments</b>	<b>Median recognition payments gap</b>
<b>Male</b>	£222.22	-12.5%	£250	10.0%
<b>Female</b>	£250.00		£225	

Recognition payments are payable to employees who undertake duties and responsibilities which clearly fall outside the scope of their post or exceed performance expected of the job they occupy. The above figures include any recognition payments made from 1 April 2021 through to 31 March 2022 inclusive, where the employee still worked for the council on 31 March 2022.

6.5% of total employees received recognition payments, 3.5% of all male employees received a recognition payment and 10.0% of all female employees received a recognition payment.

The median calculation of recognition payments shows that male employees received 10.0% more than female employees. However, the mean figure provides a different interpretation of the average recognition payment, showing that this gap is reversed, with female employees receiving 12.5% more than male employees.

**Percentage of male and female employees in each quartile ranked by hourly pay**

The council’s staff have been ranked by hourly pay and then divided into four equal groups (quartiles) to demonstrate the gendered distribution of staff across the pay scale.

	Men		Women		Total no. of employees
	No. of employees	%	No. of employees	%	
<b>Quartile 1</b> (£8.63* – £15.59 per hour)	89	74.2%	31	25.8%	120
<b>Quartile 2</b> £15.59 - £19.07 per hour)	63	52.9%	56	47.1%	119
<b>Quartile 3</b> (£19.07- £25.34 per hour)	46	38.7%	73	61.3%	119
<b>Quartile 4</b> (£ 25.34 - £89.33 per hour)	59	49.6%	60	50.4%	119
<b>All full-pay relevant employees</b>	<b>257</b>	<b>53.9%</b>	<b>220</b>	<b>46.1%</b>	<b>477</b>

*Percentages have been rounded to 1 decimal place*

*\*This figure includes apprentices*

This table demonstrates that the lowest paid jobs at Test Valley Borough Council are occupied by more men than women whilst there are more women in the middle of the organisation's pay scale. The highest paid jobs are occupied relatively equally by both men and women.

**Conclusion**

The median gender pay gap for TVBC is -19.3% compared to the national pay gap at 15.4%. This range of calculations demonstrates that women are predominantly found

in middle-income pay grades at Test Valley Borough Council, whereas the majority of lowest paid employees are men. The highest paid jobs are occupied relatively equally by both men and women.
